HAMED NIROOMAND

Senior Web Developer | Vue · Nuxt · TypeScript

Yerevan, Armenia (UTC+4) · niroomand.dev · hamed@niroomand.dev · github.com/hamedniroomand · linkedin.com/in/hamedniroomand

PROFESSIONAL SUMMARY

Senior web developer with 7+ years in the JavaScript ecosystem, most recently leading a Nuxt 4 / Vue 3 team in production. Led 5 engineers at Jack Westin (2022 to 2026), a US EdTech platform with 500K+ registered accounts and thousands of daily active students. Owned the frontend architecture and technical strategy, designed REST API contracts with the backend lead, turned PRDs into phased delivery plans, and ran frontend hiring. Built a shared design-system and core-logic library (Storybook, 95%+ coverage, used by 4 apps) and a micro-frontend integration for the marketing site. Alongside this, held a part-time architecture and advisory role at Thales MFI, a German crypto asset manager, where I built a real-time multi-chain, multi-exchange portfolio tracker in Nuxt 4, NestJS, and Bun. Deepest in Vue/Nuxt, keen on new tooling (Bun, Hono, AI SDK, MCP) and quick to pick up whatever a team already uses.

CORE COMPETENCIES

Leadership & Product:	Technical Leadership, Frontend Architecture, Technical Roadmapping, PRD-to-Task Breakdown, API Contract Design, Sprint Planning, Code Review, Hiring & Technical Interviewing, Mentoring, Knowledge Sharing, Technical Documentation
Engineering & Quality:	Vue 3, Nuxt 4, TypeScript, Design Systems, Micro-Frontends, SSR/Hydration, Performance Optimization, REST APIs, Testing Strategy, CI/CD, Design Patterns, Clean Architecture, UX Auditing

WORK EXPERIENCE

Jack Westin — USA (Remote, Full-time)

Jan 2022 – Aug 2026

MCAT-prep e-learning platform. Promoted from Senior Frontend Developer to Frontend Team Lead in Sep 2022.

Frontend Team Lead

Sep 2022 – Aug 2026

- Led a team of 5 frontend engineers building Vue 3/Nuxt 4 applications for a platform with 500K+ registered accounts and thousands of daily active students. Owned frontend architecture, technical strategy, and delivery planning.
- Ran frontend hiring for mid-level and lead positions: wrote the role requirements, designed the technical assignments, and interviewed 40+ candidates, resulting in 3 hires.
- Partnered with the backend lead to design RESTful API contracts (resource modeling, auth-resolved routes, versioning) before implementation started, which cut integration rework and cross-team blockers.
- Worked with product managers to break PRDs into technical tasks and phased milestones, and designed the technical flow and architecture for every major feature.
- Designed and built a shared design-system and core-logic library (Storybook, Vitest, 95%+ test coverage), published as versioned npm packages via GitHub Packages and consumed by 4 consumer applications.
- Gave the marketing team reusable components and business logic through a micro-frontend embedded in their WordPress site, so the same features no longer had to be built twice on two stacks.
- Architected the platform's core learning products: interactive testing and exam suites, an Anki-style spaced-repetition flashcard system with a full card-template engine, interactive online books, a custom video learning player, and a companion Chrome extension.
- Built the subscription and checkout experience on Stripe custom elements, covering recurring plans and one-time purchases end to end.
- Built an AI chat tutor that streams LLM responses token-by-token into a Nuxt UI (AI SDK) through a Laravel proxy to OpenAI, with authenticated server-side chat history and KaTeX rendering for MCAT formulas.
- Set the team's engineering standards (code-review checklists, testing guidelines, CI/CD pipelines), which made releases predictable and caught regressions before they reached production.
- Ran regular knowledge-sharing workshops and 1:1 mentoring, and wrote the onboarding and system documentation new engineers used to get set up and contributing across all team projects on their own.

Senior Frontend Developer

Jan 2022 – Sep 2022

- Built and shipped core Vue/Nuxt features for the student-facing platform, and was promoted to Team Lead within eight months.

Thales MFI GmbH — Germany (Remote, Part-time, concurrent with Jack Westin) Jan 2024 – Apr 2026

Technical Consultant & Software Engineer. Crypto asset-management company. Engaged as Technical Advisor, extended to QA lead, then contracted to build products end to end.

- Architected and built a real-time crypto portfolio tracker (Nuxt 4, Bun, TypeScript) that lets asset managers register client wallet addresses and exchange API keys and monitors assets, positions, and orders across 16 blockchains and 12 exchanges, with live analytics, charts, and configurable alerts advisors use to recommend entries and exits.
- Designed one integration layer over very different chain providers and exchange APIs, using patterns such as Strategy and Factory so every source sits behind the same contract with its own fetching flow. The result is clean and testable, and adding a new chain or exchange is a single-module change.
- Built a project resource-management system (Nuxt 4, NestJS) for planning team members, time allocation, and compensation.
- Built a private MCP server (Hono, Bun) that exposes internal data and operations as tools for AI coding agents, which the CTO uses to prototype product ideas directly against production systems.
- Advised the engineering team on frontend architecture, state management, and critical bug fixes, and acted as release quality gatekeeper with manual, API-level, and UX validation.

FARO Creaform — Germany (Remote, Part-time, concurrent with Joorchin) Aug 2021 – Jan 2022

Software Engineer

- Built Node.js/TypeScript/Express REST services and Vue/Vuetify admin dashboards with full test coverage under enterprise codebase standards.

Joorchin Digital Marketing Agency — Iran (Full-time) Aug 2021 – Jan 2022

Frontend Developer

- Translated Figma designs into responsive Vue and WordPress front-ends for client web builds.

Xaankoo — Iran (Full-time) May 2019 – Jul 2021

Web Developer. SEO-tooling startup agency.

- Built the customer-facing SEO dashboard in Vue on a Laravel backend: keyword research, daily Google index and rank tracking with trend charts and alerts, and on-page/technical SEO utilities.

OPEN SOURCE

layerscope — layer boundary checks for Nuxt apps github.com/hamedniroomand/nuxt-layerscope

TypeScript, Nuxt, Vue · Nuxt 3 and 4 · Nuxt module, CLI, ESLint plugin, GitHub Action, DevTools tab

- Resolves auto-imported composables, components and Nitro server utils the same way Nuxt does, and fails CI when a layer uses something it is not allowed to. Works with local, npm and remote layers.
- Baselines for existing projects, a drift report for each pull request, and a Nuxt DevTools tab that draws the layer graph.

edgefit — runtime compatibility check before you deploy github.com/hamedniroomand/edgefit

TypeScript, Node.js · CLI and GitHub Action · edgefit.kitdev.space

- Follows every dependency from the entry point with the export conditions of the target, and reports each Node or Web API that Cloudflare Workers, Bun, Deno or Vercel Edge does not support, with its import chain.
- Pinned compatibility data with a source for every result. Code it cannot analyze is reported as unknown, never as safe.

TECHNICAL SKILLS

Frontend:	Vue 3, Nuxt 4, TypeScript, JavaScript (ESNext), Pinia, Nuxt UI, Tailwind CSS, UnoCSS, Vuetify, Storybook, Zod, React, Svelte
Backend & Runtimes:	Node.js, NestJS, Express, Hono, Bun, REST API Design, MCP Servers / AI Agent Tooling, Blockchain & Exchange API Integration, Laravel (API integration)
Quality & Testing:	Vitest, Playwright, Cypress, Postman, Manual QA, UX Auditing
DevOps & Tooling:	Docker, GitHub Actions, GitLab CI, GitHub Packages, Vercel, Vite, Git, Figma-to-Code

EDUCATION & LANGUAGES

B.Sc. in Mechanical Engineering — Khayyam University, Mashhad, Iran 2018 – 2022

Languages: Persian (Native) · English (Full Professional Proficiency)
